Hardhat Wearables rebrands as Hardhat Connect - industrial collaboration for remote and hazardous worksites

August 10, 2017

VICTORIA, BC - Priologic Software Inc. (<https://priologic.com>) has rebranded Hardhat Wearables to Hardhat Connect (<https://hardhatconnect.com>). Hardhat Connect is an industrial collaboration platform for remote and hazardous worksites that have little or no Internet connectivity.

According to CEO, Doug Pelton, “the Hardhat Connect rebranding signals our move from wearable devices to a broader cross-platform set of devices. Hardhat Connect will support Android and iOS smart phones and tablets, PC and Mac computers, along with wearable and intrinsically safe and explosion proof devices.”

Hardhat Connect includes native and browser-based apps running on client devices, and a lightweight communications server that provides local signalling and messaging between a team of workers.

For workers who need to communicate using voice activated or hands-free devices, Hardhat Connect will support the Realwear HMT-1 head mounted tablet, Epson BT-300 Smart Glasses, Vusix M300 Smart Glasses, and the Fujitsu HMD.

For workers operating in potentially explosive environments, Hardhat Connect will support Intrinsically Safe or Explosion Proof devices from BARTEC PIXAVI including their Impact X Intrinsically Safe Smartphone, Orbit X Explosion Proof Wifi Camera and Gravity X Explosion Proof Camera.

“Intrinsically safe and explosion proof devices are mandatory on worksites with potentially explosive concentrations of gas or dust. Our partners in the oil and gas industry have identified demand for on-site collaboration on offshore drilling rigs. We hope to be active there this fall,” says Pelton.
